

Individual Layer Fabrication (ILF)

Alternative Wood 3D Prints with Laminators

Abby Gredell

- **85%** of strength and wood-makeup of standard woodworking
 - 3D Prints with Wood Fibers = **40%** wood-makeup
- Standard woodworking is subtractive manufacturing → a lot of **waste** (chips, dust, etc.)
- Adding wood to raw materials → change material properties & cost benefit
- Why is the wood content higher? → **Pressing step**
- Geometrical freedom
 - Furniture, packaging, load bearing parts, etc.
