

15-418: Parallel Computer Architecture and Programming

Spring 2008

Syllabus

1 Course Details at a Glance

Lectures:	Tuesdays, 12:00-1:20pm, WeH 5312 Wednesdays, 12:00-1:20pm, Hamburg Hall 1004 Thursdays, 12:00-1:20pm, WeH 5312
Instructor:	Todd C. Mowry, WeH 8105, 268-3725, tcm@cs.cmu.edu <i>Office Hours:</i> Tuesdays, 10:30-11:30am, WeH 8105
TA:	Michael Ashley-Rollman, mpa@andrew.cmu.edu <i>Office Hours:</i> Wednesdays, 4:30-5:30pm, WeH 8019
Class Admin:	Jennifer Landefeld, WeH 8120, 268-4740, jennsbl@cs.cmu.edu
Web Page:	www.cs.cmu.edu/afs/cs/academic/class/15418-s08/www/
Handouts:	<i>Electronic:</i> /afs/cs.cmu.edu/academic/class/15418-s08/public <i>Hardcopies:</i> In bins outside WeH 8120.

2 Textbooks

We will be using the following textbooks in class:

Required: David E. Culler and Jaswinder Pal Singh, with Anoop Gupta. *Parallel Computer Architecture: A Hardware/Software Approach*. Morgan Kaufmann, 1998. ISBN: 1558603433.

Strongly Recommended: Michael J. Quinn. *Parallel Programming in C with MPI and OpenMP*. McGraw Hill, 2003. ISBN: 0072822562.

We will be covering much of the material in the Culler *et al.* book, and we will be following it quite closely. Quinn's book will be extremely helpful for the programming assignments, and probably also for the class project.

3 Course Description

The goal of this course is to provide a deep understanding of the fundamental principles and engineering tradeoffs involved in designing modern parallel computers (aka “multiprocessors”), as well as the programming techniques to effectively utilize these machines. Parallel machines are already ubiquitous from desktops to supercomputers, and the expectation is that they will become even more commonplace in the future. However, very few people exploit the potential processing power of these machines because they do not understand how to write efficient parallel programs. Because one cannot design a good parallel program without understanding how parallel machines

are built and vice-versa, this course will cover both parallel hardware and software design, as well as the impact that they have on each other.

Course topics include naming shared data, synchronizing threads, and the latency and bandwidth associated with communication. Case studies on shared-memory, message-passing, data-parallel and dataflow machines will be used to illustrate these techniques and tradeoffs. Programming assignments will be performed on one or more commercial multiprocessors, and there will be a significant course project.

This is a relatively unique course since this material is rarely offered to undergraduates. Because parallel processing has become such an important and mainstream technology, the time has come to integrate this material into the undergraduate systems curriculum.

4 Prerequisites

15-213 (*Intro to Computer Systems*) is a strict prerequisite for this course. We will build directly upon the material presented in 15-213, including memory hierarchies, memory management, basic networking, etc. While 18-347 (*Intro to Computer Architecture*) would be helpful for understanding the material in this course, it is not a prerequisite.

5 Computer Accounts

To complete your programming assignments and course projects, you will be receiving accounts on machines at the National Center for Supercomputing Applications (NCSA) and the Pittsburgh Supercomputing Center (PSC). Details will be provided later.

Important: please note that the class will be allocated a finite (and not particularly large) amount of time on these machines, so please be careful not to waste time unnecessarily.

6 Course Work

Grades will be based on homeworks, a project, two exams, and class participation.

Homeworks: There will be three parallel programming assignments (which we will call “labs”), which you will work on in groups of two. (If you have difficulty locating a partner, please post a message to the class newsgroup.) Turn in a single writeup per group. In addition, we may have a few written assignments that will focus more on parallel architecture rather than programming.

Project: A major focus of this course is the project. We prefer that you work in groups of two on the project, although groups of up to three may be permitted depending on the scale of project (ask the instructor for permission before forming a group of three). A typical project would involve designing, implementing and evaluating a fairly ambitious parallel program (perhaps on more than one architecture). Some groups may choose to do projects that evaluate a new parallel architecture idea. The project must involve an experimental component—i.e. it is not simply a paper and pencil exercise. We encourage you to try to come up with your own topic for your project (subject to approval by the instructor), although we can make some suggestions if necessary. You will have roughly six weeks to work on the project. You will present your findings in a written report (the collected reports may be published as a technical report at the end of the semester), and also during a poster session during the last day of class. Start thinking about potential project ideas soon!

Exams: There will be two exams, each covering its respective half of the course material. Note that the second exam is not cumulative, and is weighted equally with the first exam. Both exams will be closed book, closed notes.

Class Participation: In general, we would like everyone to do their part to make this an enjoyable interactive experience (one-way communication is no fun). Hence in addition to attending class, we would like you to actively participate by asking questions, joining in our discussions, etc.

6.1 Grading Policy

Your overall grade is determined as follows:

Homework:	25%
Project:	25%
Exams:	40% (20% each)
Class Participation:	10%

Late assignments will not be accepted without prior arrangement.

7 Schedule

Table 1 shows the tentative schedule. The idea is to cover the lecture material in roughly the first $\frac{2}{3}$ of the semester (by meeting three rather than two days a week), so that you will have more time to devote to the class project in the last $\frac{1}{3}$ of the semester, and so that you can take advantage of all of the course lecture material in your projects.

Table 1: 15-418, Spring 2008.

Class	Date	Day	Topic	Reading	Assignments
1	1/15	Tue	Why Study Parallel Architecture?	1.1	
2	1/16	Wed	Evolution of Parallel Architecture	1.2	
3	1/17	Thu	Fundamental Design Issues	1.3-4	
4	1/22	Tue	Parallel Programming: Overview I	2.1-2	
5	1/23	Wed	Parallel Programming: Overview II	2.3-4	
6	1/24	Thu	Parallel Programming: Performance I	3.1	
7	1/29	Tue	Parallel Programming: Performance II	3.2	L1 Out
8	1/30	Wed	Parallel Programming: Performance III	3.3-4	
9	1/31	Thu	Par. Prog: Case Studies & Implications	3.5-6	
10	2/5	Tue	Workload-Driven Arch Evaluation I	4.1	
	2/6	Wed	<i>No Class</i>		
11	2/7	Thu	Workload-Driven Arch Evaluation II	4.2-3	L1 Due, L2 Out
12	2/12	Tue	Shared Memory Multiprocessors I	5.1	
13	2/13	Wed	Shared Memory Multiprocessors II	5.3	
14	2/14	Thu	Earthquake Simulation Case Study		
15	2/19	Tue	Shared Memory Multiprocessors III	5.4	
16	2/20	Wed	Directory-Based Cache Coherence I	8.1-5	
17	2/21	Thu	Directory-Based Cache Coherence II	8.6-7, 8.9-11	L2 Due
18	2/26	Tue	Exam I		L3 Out
19	2/27	Wed	Relaxed Memory Consistency Models	9.1	
	2/28	Thu	Snoop-Based Multiprocessor Design I	6.1	
20	3/4	Tue	Snoop-Based Multiprocessor Design II	6.2	
21	3/5	Wed	Snoop-Based Multiprocessor Design III	6.3-4	
22	3/6	Thu	Snoop-Based Multiprocessor Design IV	6.5, 6.7	L3 Due
<i>Spring Break</i>					
23	3/18	Tue	Synchronization	5.5., 7.9, 8.8	
	3/19	Wed	<i>Meet regarding Project Proposals</i>		
24	3/20	Thu	Scalable Distributed Memory MPs I	7.1-3	Project Proposal
25	3/25	Tue	Scalable Distributed Memory MPs II	7.4-8	
26	3/26	Wed	Interconnection Network Design	10.1-10	
27	3/27	Thu	Latency Tolerance: Prefetching	11.1, 11.6	
28	4/1	Tue	Latency Tolerance: Multithreading	11.7-9	
	4/3	Thu	<i>Meet regarding Milestone 1 Progress</i>		Project Milestone 1
	4/15	Tue	Exam II		
	4/17	Thu	<i>Meet regarding Milestone 2 Progress</i>		Project Milestone 2
	4/30	Wed			Project Report Due
	5/1	Thu	Project Poster Session
