Summary

I am an applications-oriented machine learning researcher with strong mathematical skills, strong implementation skills, and significant entrepreneurial experience. My research focuses on creating efficient algorithms that use data to improve decision-making, with application to large-scale problems in optimization, control, scheduling, transportation planning, data mining and information retrieval.

I am currently a Visiting Scientist at the MIT AI Lab, on assignment from my position as a research scientist at NASA Ames Research Center.

Research Projects / Systems Developed

2000-   **Adaptive Control of NASA Life Support Systems**
Developing learning-based controllers for life-support systems. These systems regulate the levels of air, water, food and energy for long-duration crew support in space. The associated control problems are dynamic, nonstationary, and safety-sensitive, requiring novel active-learning techniques. Work with Jeff Schneider, Leslie Kaelbling, and David Kortenkamp, in progress.

2000   **Internet Auction Trading Strategies**
Participated in the ICMAS-2000 Trading Agent Competition (TAC). This contest involved programming a travel agent to buy and sell airline tickets, hotel rooms, and entertainment tickets in 28 simultaneous Internet auctions, so as to construct profitable travel packages at minimum cost. Our entry included innovations in real-time resource allocation, pricing of single resources given combinatorial utilities, and risk mitigation. Work with Amy Greenwald.
Results: winner (out of 25) in preliminary round; co-winner (out of 12) in finals.

1999-   **Optimal Route Planning Under Time-Dependent Uncertainty**
Developed new representations and solutions for time-sensitive stochastic planning problems. Applications to telescope experiment scheduling and multimodal transportation planning. Work with Michael Littman and Mike Mitzenmacher, in progress. [2] [1] [18]

1996-   **Learning Evaluation Functions for Global Optimization**
Combined dynamic programming, function approximation and local search techniques into an algorithm that automatically constructs high-quality evaluation functions for fast combinatorial optimization. Applications to VLSI design, medical robotics, satisfiability, Bayes net structure-finding, geographic visualization, and information retrieval. Ph.D. thesis work. [17] [3] [19] [6] [8] [10] [12]

1994-   **Scaling Up Reinforcement Learning / Value Function Approximation**
Developed new algorithms for Value Function Approximation, solving large-scale high-dimensional control and scheduling problems with approximate dynamic programming. Work with Andrew Moore. [5] [7] [13] [14] [20]

1996   **Information Retrieval / Web Indexing / Machine Learning**
Developed **LASER**, a machine-learning-based search engine for the World Wide Web. Using non-intrusive feedback gathered from system users doing Web searches, it optimizes its retrieval function so as to provide better page rankings. Work with Dayne Freitag and Thorsten Joachims. [11]

1995-96	**Anonymizing Proxy System for the World Wide Web**
	Developed the **Anonymizer**, a custom proxy server that enables Web users to visit sites without revealing personal information such as their email address and Internet hostname. In April 1997, the system was sold to Infonex, Inc. and made available to the public at www.anonymizer.com. [9]
1995-96	**Internet Privacy Demonstration**
	Created a script to demonstrate how Internet users may reveal personal information to every web site they visit. This script won a Netscape "Bugs Bounty" award in January 1996 and was featured for several years on the home page of the Center for Democracy and Technology. [9]
1993-94	**Reinforcement Learning for Network Routing / Multi-Agent Learning**
	Invented Q-routing, a parallel distributed reinforcement-learning algorithm for routing packet traffic in a computer network. The routing tables adapt to varying network topologies and traffic loads. This study has been followed up by at least five separate groups of researchers. Work with Michael Littman. [15] [16]
1992-93	**Artificial Neural Network algorithms**
	Designed and tested extensions to cascading and modular neural network architectures. Work with Frank Fallside, Tony Robinson and Scott Fahlman. [25]
1992-94	**Self-Learning Backgammon Software**
	Wrote software combining temporal-difference learning and modular neural networks in order to train, from scratch, an expert-level computer backgammon player. My software now serves as the playing engine of MVP Backgammon, an award-winning commercial product. [25]
1986-95	**Sole proprietor, BOYAN Communications**
	Authored *BOYAN Communications*, a best-selling PC modem program. Maintained, documented, and marketed four major versions of the software over a ten-year life cycle.

- Software reviewed in over 100 publications, including:
  - *PC Week*, 6/2/87
  - *PC Magazine*, "The Best of 1987", 1/12/88
  - *PC World*, "The Best of Shareware", 8/88
  - *Home Computing*, "Editor's Pick", 6/89

Chronology / Awards

- **NASA Ames Research Center**, Mountain View, CA. Research Scientist, September 1998-present.
  - Visiting Scientist, **MIT AI Lab**, January 2000-present.
  - Group affiliation at Ames: Autonomy and Robotics Area, Computational Sciences Division
  - Co-winner, ICMAS-2000 Trading Agent Competition, July 2000
  - **Best Paper Award, ICML-99 conference**, June 1999 [5]
  - NASA Ames Spotlight Award, April 1999
- **Carnegie Mellon University**, Pittsburgh, PA. **Ph.D., Computer Science**, August 1998; **M.S.**, May 1995.
  - Dissertation: "Learning Evaluation Functions for Global Optimization" [19]
  - Thesis committee: Andrew Moore (co-chair), Scott Fahlman (co-chair), Tom Mitchell, Tom Dietterich
  - **Outstanding Paper Award, AAAI-98 conference**, July 1998 [6]
  - NASA Graduate Student Researchers Program Fellowship, 1996-98
  - Pennsylvania Space Grant Fellowship, 1995
  - National Defense Science and Engineering Graduate Fellowship, 1992-95
  - National Science Foundation Fellowship, 1991 (declined)
  - Elected to Sigma Xi, 1995
  - First place tie, CMU Programming Contest, September 1994
- **University of Cambridge**, Cambridge, UK. **M.Phil.**, Computer Speech and Language Processing, August 1992.
  - Thesis: "Modular Neural Networks for Learning Context-Dependent Game Strategies" [25]

- ○ Advisors: Frank Fallside and Tony Robinson
- ○ Churchill Scholarship, awarded to ten U.S. students annually for scientific studies at Cambridge, 1991-92
- **University of Chicago**, Chicago, IL. **B.S.** with General Honors, Mathematics, June 1991.
  - ○ Cumulative undergraduate GPA: 3.93 / 4.00
  - ○ Paul R. Cohen Memorial Prize, awarded to the graduating senior who has achieved the highest academic record in mathematics, 1991
  - ○ Elected to Phi Beta Kappa, 1990
  - ○ Mensa Education & Research Foundation Scholarship, 1991
  - ○ State Farm Foundation Exceptional Student Fellowship, 1991
  - ○ *Time Magazine* College Achievement Award, 1990
  - ○ University of Chicago College Honors Scholarship (merit-based half-tuition scholarship), 1987-91
- **Oakland Mills High School**, Columbia, MD. May 1987.
  - ○ Valedictorian.

Professional Activities / Teaching

2000-2003	Editorial Board, *Machine Learning Journal*
2000	Co-organizer, AAAI-2000 Workshop on Artificial Intelligence for Web Search
2000	Organizer, MIT Statistical AI Reading Group
1999	Organizer, Workshop on Statistical Machine Learning for Large-Scale Optimization, Stockholm, Sweden *I co-organized this IJCAI workshop with Wray Buntine. An edited version of the proceedings will appear in* Neural Computing Surveys. [17]
1999	Judge, Siemens Westinghouse Science and Technology Competition, Princeton, NJ
1998	Judge, Santa Clara Valley Science and Engineering Fair, San Jose, CA
1998	Invited speaker, Symposium on Applications of Reinforcement Learning, Stanford University *I was one of fifteen invited speakers at this symposium.*
1997	Invited speaker, NSF/CNPq Joint Workshop on Intelligent Robotic Agents, Porto Alegre, Brazil
1996	Invited speaker, NSF Reinforcement Learning workshop, Harper's Ferry, WV *I was one of three graduate students invited to participate in this national workshop.*
1995	Organizer, Workshop on Value Function Approximation, Tahoe City, CA *I co-organized this Machine Learning Conference workshop with Andrew Moore and Rich Sutton.*
1995	Teaching Assistant, *How to Think (Like a Computer Scientist)* Instructor: Rudich.
1993	Teaching Assistant, *Artificial Neural Networks* (graduate course) Instructors: Touretzky, Waibel, Fahlman, and Pomerleau.
1992-1997	Organizer, CMU Reinforcement Learning Group
1993-	Paper Referee: American Association for Artificial Intelligence conference (1998, 2000), Artificial Intelligence Journal (2000), International Conference on Machine Learning (1993, 2000), International Joint Conference on Artificial Intelligence (1995, 1997), IEEE Transactions on Neural Networks (1998), International Symposium on Artificial Intelligence, Robotics and Automation in Space (1999), Journal of Artificial Intelligence Research (1994, 1998, 1999), Machine Learning Journal (1993, 1994, 1997, 1999), Neural Computation (1997), Neural Networks (1994), Neural Information Processing Systems conference (1993, 1994, 1998, 1999)

1986-93   Mathematics teacher, Johns Hopkins University *Center for Talented Youth* residential summer program
