

Quizlet 3 version A (7 minutes)

15-110 F24

9/25

AndrewID: _____

Name: _____

Please place your answer entirely inside the answer box. Do not use concepts not covered through Week 3 (no lists, no for loops).

Write a function `totalOdds(n)` that takes a non-negative integer `n` and sums all the odd numbers from **0 to `n` inclusive** and **returns the sum**. **YOU MUST USE A WHILE LOOP.**

For example: `totalOdds(5)` returns 9 because the sum of $1+3+5 = 9$.

Write your solution here:

```
# Solution 1
def totalOdds(n):
    total = 0
    i = 0
    while i <= n:
        if i % 2 != 0:
            total = total + i
        i = i + 1
    return total

# Solution 2
def totalOdds(n):
    total = 0
    i = 1
    while i <= n:
        total = total + i
        i = i + 2
    return total
```
