

Functions

In the function call below, how many arguments are there?

```
msg_to_santa(name, age, wish)
```

What keyword denotes the start of a function?

What would happen when calling a function that has no return statement?

What's the difference between print and return statements inside a function?

Trace the value of each variable at every line. Why do you see what you see?

```
x = 2
```

```
y = 3
```

```
def powOf10(x, y):
```

```
    y = 10
```

```
    Return x^y
```

```
print(x, y)
```
