Quizlet 2 Solutions

```python
x = 5
z = 7

def fun1(x,y):
    w = x + y
    print("x:", x)
    return w

fun1(3,z)
```

Look at the block of code on the left.

#1: Are there any global variables? If yes, what are they? x, z

#2: Are there any local variables? If yes, what are they? x, y, w

#3: Does the function call to fun1 have any argument(s)? If yes, list it/them. 3, 7

#4: Does the function call have any returned value(s)? If yes, list it/them. 10
