---

---

---

---

---

---

---

 CMU SCS

Introduction

- After ER design, schema refinement, and the definition of views, we have the *conceptual* and *external* schemas for our database.
- Next step?

Faloutsos & Pavlo      CMU SCS 15-415/615      3

---

---

---

---

---

---

---

---

CMU SCS

## Introduction

- After ER design, schema refinement, and the definition of views, we have the *conceptual* and *external* schemas for our database.
- Next step?
- choose indexes, make clustering decisions, and to refine the conceptual and external schemas (if necessary) to meet performance goals.
- How to decide the above?

Faloutsos & Pavlo      CMU SCS 15-415/615      4

---

---

---

---

---

---

---

---

CMU SCS

## Introduction

- How to decide the above?

Paraphrasing [Sun Tzu / Sun Wu / Sunzi] 

**Know [the] other,**  
**know [the] self,**  
**hundred battles without danger**

Faloutsos & Pavlo      CMU SCS 15-415/615      5

---

---

---

---

---

---

---

---

CMU SCS

## Introduction

- How to decide the above?

Paraphrasing [Sun Tzu / Sun Wu / Sunzi] 

**Know [the] workload**  
**know [the] Q-opt internals**

Faloutsos & Pavlo      CMU SCS 15-415/615      6

---

---

---

---

---

---

---

---

CMU SCS

## Introduction

- We must begin by understanding the **workload**:
  - The most important queries and how often they arise.
  - ..... updates .....
  - The desired performance for these queries and updates.

Faloutsos & Pavlo      CMU SCS 15-415/615      7

---

---

---

---

---

---

---

---

CMU SCS

## Decisions to Make

- ??

Faloutsos & Pavlo      CMU SCS 15-415/615      8

---

---

---

---

---

---

---

---

CMU SCS

## Decisions to Make

- What indexes should we create?
  
- For each index, what kind of an index should it be?
  
- Should we make changes to the conceptual schema?

Faloutsos & Pavlo      CMU SCS 15-415/615      9

---

---

---

---

---

---

---

---

CMU SCS

## Decisions to Make

- What indexes should we create?
  - Which relations should have indexes? What field(s) should be the search key? Should we build several indexes?
- For each index, what kind of an index should it be?
  - Clustered? Hash/tree?
- Should we make changes to the conceptual schema?
  - Consider alternative normalized schemas? (Remember, there are many choices in decomposing into BCNF, etc.)
  - Should we ``undo'' some decomposition steps and settle for a lower normal form? (*Denormalization.*)
  - Horizontal partitioning, replication, views ...

Faloutsos & Pavlo      CMU SCS 15-415/615      10

---

---

---

---

---

---

---

---

CMU SCS

## Overview

- Introduction
- ➡ • Index selection and clustering
- Database tuning (de-normalization etc)
- Impact of concurrency

Faloutsos & Pavlo      CMU SCS 15-415/615      11

---

---

---

---

---

---

---

---

CMU SCS

### Example 1

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE D.dname='Toy' AND E.dno=D.dno
```

- which index, if any, would you build?

EMP

ename	dno

DEPT

dno	dname	mgr
	toy	

Faloutsos & Pavlo      CMU SCS 15-415/615      12

---

---

---

---

---

---

---

---

CMU SCS

### Example 1

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE D.dname='Toy' AND E.dno=D.dno
```

- Hash index on *D.dname* supports 'Toy' selection.
  - Given this, index on *D.dno* is not needed.
- Hash index on *E.dno* allows us to get matching (inner) Emp tuples for each selected (outer) Dept tuple.

Faloutsos & Pavlo CMU SCS 15-415/615 13

---

---

---

---

---

---

---

---

---

---

CMU SCS

### Example 1

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE D.dname='Toy' AND E.dno=D.dno
```

- What if WHERE included: `` ... AND E.age=25`` ?

Faloutsos & Pavlo CMU SCS 15-415/615 14

---

---

---

---

---

---

---

---

---

---

CMU SCS

### Example 1

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE D.dname='Toy' AND E.dno=D.dno
```

- What if WHERE included: `` ... AND E.age=25`` ?
  - Could retrieve Emp tuples using index on *E.age*, then join with Dept tuples satisfying *dname* selection. Comparable to strategy that used *E.dno* index.
  - So, if *E.age* index is already created, this query provides much less motivation for adding an *E.dno* index.

Faloutsos & Pavlo CMU SCS 15-415/615 15

---

---

---

---

---

---

---

---

---

---

CMU SCS

**Example 2**

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE E.sal BETWEEN 10000 AND 20000
AND E.hobby='Stamps' AND E.dno=D.dno
```

EMP    *ename* *dno* *sal* *hobby*    DEPT    *dno* *dname* *mgr*

Faloutsos & Pavlo    CMU SCS 15-415/615    16

---

---

---

---

---

---

---

---

CMU SCS

**Example 2**

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE E.sal BETWEEN 10000 AND 20000
AND E.hobby='Stamps' AND E.dno=D.dno
```

- Emp should be the outer relation – indices for Dept?
- What index for Emp?

Faloutsos & Pavlo    CMU SCS 15-415/615    17

---

---

---

---

---

---

---

---

CMU SCS

**Example 2**

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE E.sal BETWEEN 10000 AND 20000
AND E.hobby='Stamps' AND E.dno=D.dno
```

- Emp should be the outer relation – indices for Dept?
  - hash index on *D.dno*.
- What index for Emp?

Faloutsos & Pavlo    CMU SCS 15-415/615    18

---

---

---

---

---

---

---

---

CMU SCS

### Example 2

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE E.sal BETWEEN 10000 AND 20000
AND E.hobby='Stamps' AND E.dno=D.dno
```

- Emp should be the outer relation – indices for Dept?
  - hash index on *D.dno*.
- What index for Emp?
  - B+ tree on *E.sal*, OR an index on *E.hobby*. Only one is probably enough – whichever has better selectivity.
    - As a rule of thumb, equality selections more selective than range selections.
- Notice: in both examples, the choice of indexes depends on the plan(s) we expect from the optimizer. *Have to understand optimizers!*

Faloutsos & Pavlo      CMU SCS 15-415/615      19

---

---

---

---

---

---

---

---

CMU SCS

### Clustering and Joins

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE D.dname='Toy' AND E.dno=D.dno
```

- What plan? what clustering?

Faloutsos & Pavlo      CMU SCS 15-415/615      20

---

---

---

---

---

---

---

---

CMU SCS

### Clustering and Joins

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE D.dname='Toy' AND E.dno=D.dno
```

- Index on Emp.dno – clustered or not?

Faloutsos & Pavlo      CMU SCS 15-415/615      21

---

---

---

---

---

---

---

---

CMU SCS

## Clustering and Joins

```
SELECT E.ename, D.mgr
FROM Emp E, Dept D
WHERE D.dname='Toy' AND E.dno=D.dno
```

- Index on Emp.dno – clustered or not?
- A: clustered will be much faster

Faloutsos & Pavlo CMU SCS 15-415/615 22

---

---

---

---

---

---

---

---

CMU SCS

## Overview

- Introduction
- Index selection and clustering
- ➡ • Database tuning (de-normalization etc)
- Impact of concurrency

Faloutsos & Pavlo CMU SCS 15-415/615 23

---

---

---

---

---

---

---

---

CMU SCS

## Tuning the Conceptual Schema

- The choice of conceptual schema should be guided by the workload, in addition to redundancy issues:
  - We may settle for a 3NF schema rather than BCNF.
  - Workload may influence the choice we make in decomposing a relation into 3NF or BCNF.
  - We may further decompose a BCNF schema!
  - We might *denormalize* (i.e., undo a decomposition step), or we might add fields to a relation.
  - We might consider *horizontal decompositions*.

Faloutsos & Pavlo CMU SCS 15-415/615 24

---

---

---

---

---

---

---

---

CMU SCS

### Tuning the Conceptual Schema

- If such changes are made after a database is in use: called *schema evolution*
- Q: How to mask these changes from applications?

Student 

Ssn	name

 ⇒ New\_Student 

Ssn	name	year

Faloutsos & Pavlo CMU SCS 15-415/615 25

---

---

---

---

---

---

---

---

CMU SCS

### Tuning the Conceptual Schema

- If such changes are made after a database is in use: called *schema evolution*
- Q: How to mask these changes from applications?
- A: Views!

Student 

Ssn	name

 ⇒ New\_Student 

Ssn	name	year

Faloutsos & Pavlo CMU SCS 15-415/615 26

---

---

---

---

---

---

---

---

CMU SCS

### Tuning the Conceptual Schema

- If such changes are made after a database is in use: called *schema evolution*
- Q: How to mask these changes from applications?
- A: Views!

```
create view student as
select ssn, name
from new_student
```

student 

Ssn	name

 ⇒ new\_student 

Ssn	name	year

Faloutsos & Pavlo CMU SCS 15-415/615 27

---

---

---

---

---

---

---

---

CMU SCS

## Tuning the Conceptual Schema

- The choice of conceptual schema should be guided by the workload, in addition to redundancy issues:
  - ▶ We may settle for a 3NF schema rather than BCNF.
    - Workload may influence the choice we make in decomposing a relation into 3NF or BCNF.
    - We may further decompose a BCNF schema!
    - We might *denormalize* (i.e., undo a decomposition step), or we might add fields to a relation.
    - We might consider *horizontal decompositions*.

Faloutsos & Pavlo      CMU SCS 15-415/615      28

---

---

---

---

---

---

---

---

CMU SCS

## Example?

- Q: When would we choose 3NF instead of BCNF?

Faloutsos & Pavlo      CMU SCS 15-415/615      29

---

---

---

---

---

---

---

---

CMU SCS

## Example?

- Q: When would we choose 3NF instead of BCNF?
- A: Student-Teacher-subJect (STJ)
  - S J -> T
  - T -> J
 and queries ask for all three attributes ( `select *` )

Faloutsos & Pavlo      CMU SCS 15-415/615      30

---

---

---

---

---

---

---

---

CMU SCS

## Tuning the Conceptual Schema

- The choice of conceptual schema should be guided by the workload, in addition to redundancy issues:
  - ✓ We may settle for a 3NF schema rather than BCNF.
    - Workload may influence the choice we make in decomposing a relation into 3NF or BCNF.
  - ➡ We may further decompose a BCNF schema!
    - We might *denormalize* (i.e., undo a decomposition step), or we might add fields to a relation.
    - We might consider *horizontal decompositions*.

Faloutsos & Pavlo      CMU SCS 15-415/615      31

---

---

---

---

---

---

---

---

CMU SCS

## Decomposition of a BCNF Relation

- Q: Scenario?

Faloutsos & Pavlo      CMU SCS 15-415/615      32

---

---

---

---

---

---

---

---

CMU SCS

## Decomposition of a BCNF Relation

- Q: Scenario?
- A: eg., STUDENT(ssn, name, address, ph#, ...)
- with many queries like
 

```
select ssn, name
from student
```

Faloutsos & Pavlo      CMU SCS 15-415/615      33

---

---

---

---

---

---

---

---

CMU SCS

## Tuning the Conceptual Schema

- The choice of conceptual schema should be guided by the workload, in addition to redundancy issues:
  - ✓ We may settle for a 3NF schema rather than BCNF.
    - Workload may influence the choice we make in decomposing a relation into 3NF or BCNF.
  - ✓ We may further decompose a BCNF schema!
  - ➡ We might *denormalize* (i.e., undo a decomposition step), or we might add fields to a relation.
    - We might consider *horizontal decompositions*.

Faloutsos & Pavlo      CMU SCS 15-415/615      34

---

---

---

---

---

---

---

---

CMU SCS

## De-normalization

- Q: Scenario?

Faloutsos & Pavlo      CMU SCS 15-415/615      35

---

---

---

---

---

---

---

---

CMU SCS

## De-normalization

- Q: Scenario?
- A: E.g.,
  - STUDENT (ssn, name)
  - TAKES (ssn, cid, grade)
  - COURSE (cid, cname)
  - and many queries like: ‘class roster for db-apps’
- Q: resulting table(s) and views?

Faloutsos & Pavlo      CMU SCS 15-415/615      36

---

---

---

---

---

---

---

---

CMU SCS

## Tuning the Conceptual Schema

- The choice of conceptual schema should be guided by the workload, in addition to redundancy issues:
  - ✓ We may settle for a 3NF schema rather than BCNF.
    - Workload may influence the choice we make in decomposing a relation into 3NF or BCNF.
  - ✓ We may further decompose a BCNF schema!
  - ✓ We might *denormalize* (i.e., undo a decomposition step), or we might add fields to a relation.
  - ➡ We might consider *horizontal decompositions*.

Faloutsos & Pavlo CMU SCS 15-415/615 37

---

---

---

---

---

---

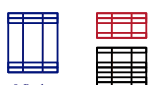

---

---

CMU SCS

## Horizontal Decompositions

Sometimes, might want to replace relation by a collection of relations that are *selections*. Eg.,  
 STUDENT (ssn, name, status)  
 decomposed to  
 CurrentStudent (ssn, name, status)  
 Alumni (ssn, name, status)  
 Q: under what scenario would this help performance?

Faloutsos & Pavlo CMU SCS 15-415/615 38

---

---

---

---

---

---

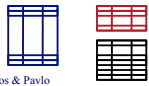

---

---

CMU SCS

## Horizontal Decompositions

Sometimes, might want to replace relation by a collection of relations that are *selections*. Eg.,  
 STUDENT (ssn, name, status)  
 decomposed to  
 CurrentStudent (ssn, name, status)  
 Alumni (ssn, name, status)  
 Q: under what scenario would this help performance?

A: most queries on 'current', & too large 'alumni' table

Faloutsos & Pavlo CMU SCS 15-415/615 39

---

---

---

---

---

---

---

---

CMU SCS

## Horizontal Decompositions

Sometimes, might want to replace relation by a collection of relations that are *selections*. Eg.,  
 STUDENT (ssn, name, status)  
 decomposed to  
 CurrentStudent (ssn, name, status)  
 Alumni (ssn, name, status)

Q': How to mask the change?

Faloutsos & Pavlo CMU SCS 15-415/615 40

---

---

---

---

---

---

---

---

CMU SCS

## Masking Conceptual Schema Changes

```
CREATE VIEW STUDENT(ssn, name, status)
AS SELECT *
FROM CurrentStudent
UNION
SELECT *
FROM Alumni
```

- Masks change
- But performance-minded users should query the correct table

Faloutsos & Pavlo CMU SCS 15-415/615 41

---

---

---

---

---

---

---

---

CMU SCS

## Tuning Queries and Views

- If a query runs slower than expected, what to check?

Faloutsos & Pavlo CMU SCS 15-415/615 42

---

---

---

---

---

---

---

---

 CMU SCS

### Tuning Queries and Views

- If a query runs slower than expected, check
  - the plan that is used! (and adjust indices/query/views)

Faloutsos & Pavlo      CMU SCS 15-415/615      43

---

---

---

---

---

---

---

---

 CMU SCS

### Tuning Queries and Views

- If a query runs slower than expected, check
  - the plan that is used! (and adjust indices/query/views)
  - whether statistics are too old

Faloutsos & Pavlo      CMU SCS 15-415/615      44

---

---

---

---

---

---

---

---

 CMU SCS

### Tuning Queries and Views

- If a query runs slower than expected, check
  - the plan that is used! (and adjust indices/query/views)
  - whether statistics are too old or
  - whether an index needs to be re-built, or

Faloutsos & Pavlo      CMU SCS 15-415/615      45

---

---

---

---

---

---

---

---

CMU SCS

## Tuning Queries and Views

- Sometimes, the DBMS may not be executing the plan you had in mind. Common areas of weakness:

Faloutsos & Pavlo      CMU SCS 15-415/615      46

---

---

---

---

---

---

---

---

CMU SCS 

## Tuning Queries and Views

- Sometimes, the DBMS may not be executing the plan you had in mind. Common areas of weakness:
  - Selections involving **null values**.
  - Selections involving **arithmetic or string expressions**.
  - Selections involving **OR conditions**.
  - **Lack of evaluation features** like index-only strategies or certain join methods or poor size estimation.

Faloutsos & Pavlo      CMU SCS 15-415/615      47

---

---

---

---

---

---

---

---

CMU SCS 

## Tuning Queries and Views

- Sometimes, the DBMS may not be executing the plan you had in mind. Common areas of weakness:
  - Selections involving **null values**.      > 3\* salary
  - Selections involving **arithmetic or string expressions**.
  - Selections involving **OR conditions**.      like "%main%"
  - **Lack of evaluation features** like index-only strategies or certain join methods or poor size estimation.

Faloutsos & Pavlo      CMU SCS 15-415/615      48

---

---

---

---

---

---

---

---

CMU SCS

## Rewriting SQL Queries

- Complicated by interaction of:
  - NULLs, duplicates, aggregation, subqueries
- Guideline: Use **only one** “query block”, if possible.

```

SELECT DISTINCT *
FROM Sailors S
WHERE S.sname IN
  (SELECT Y.sname
   FROM YoungSailors Y)
  =  ??

```

Faloutsos & Pavlo      CMU SCS 15-415/615      49

---

---

---

---

---

---

---

---

CMU SCS

## Rewriting SQL Queries

- Complicated by interaction of:
  - NULLs, duplicates, aggregation, subqueries
- Guideline: Use **only one** “query block”, if possible.

```

SELECT DISTINCT *
FROM Sailors S
WHERE S.sname IN
  (SELECT Y.sname
   FROM YoungSailors Y)
  =
SELECT DISTINCT S.*
FROM Sailors S,
   YoungSailors Y
WHERE S.sname = Y.sname

```

Faloutsos & Pavlo      CMU SCS 15-415/615      50

---

---

---

---

---

---

---

---

CMU SCS

## More Guidelines for Query Tuning

- Minimize the use of DISTINCT: when?

Faloutsos & Pavlo      CMU SCS 15-415/615      51

---

---

---

---

---

---

---

---

CMU SCS

## More Guidelines for Query Tuning

- Minimize the use of DISTINCT: when?
- A1: when duplicates are acceptable, or
- A2: if answer contains a key.

```
SELECT DISINCT ssn
FROM Student;
```

Faloutsos & Pavlo      CMU SCS 15-415/615      52

---

---

---

---

---

---

---

---

CMU SCS

## More Guidelines for Query Tuning

- Consider DBMS use of index when writing arithmetic expressions:
- $E.age=2*D.age$  will benefit from index on  $E.age$ , but might not benefit from index on  $D.age$ !

Faloutsos & Pavlo      CMU SCS 15-415/615      53

---

---

---

---

---

---

---

---

CMU SCS

## More Guidelines for Query Tuning

- Minimize the use of GROUP BY and HAVING:

```
SELECT MIN (E.age)
FROM Employee E → ??
GROUP BY E.dno
HAVING E.dno=102
```

Faloutsos & Pavlo      CMU SCS 15-415/615      54

---

---

---

---

---

---

---

---

CMU SCS

## More Guidelines for Query Tuning

- Minimize the use of GROUP BY and HAVING:

```

SELECT MIN (E.age)   SELECT MIN (E.age)
FROM Employee E     FROM Employee E
GROUP BY E.dno      WHERE E.dno=102
HAVING E.dno=102
  
```

Faloutsos & Pavlo      CMU SCS 15-415/615      55

---

---

---

---

---

---

---

---

CMU SCS

## Guidelines for Query Tuning (Contd.)

- Avoid using intermediate relations:

```

SELECT * INTO Temp
FROM Emp E, Dept D
WHERE E.dno=D.dno
      AND D.mgrname='Joe'
      and
SELECT T.dno, AVG(T.sal)
FROM Temp T
GROUP BY T.dno
  
```

vs.      ???

Faloutsos & Pavlo      CMU SCS 15-415/615      56

---

---

---

---

---

---

---

---

CMU SCS

## Guidelines for Query Tuning (Contd.)

- Avoid using intermediate relations:

```

SELECT E.dno, AVG(E.sal)
FROM Emp E, Dept D
WHERE E.dno=D.dno
      AND D.mgrname='Joe'
GROUP BY E.dno
  
```

```

SELECT * INTO Temp
FROM Emp E, Dept D
WHERE E.dno=D.dno
      AND D.mgrname='Joe'
      and
SELECT T.dno, AVG(T.sal)
FROM Temp T
GROUP BY T.dno
  
```

vs.

Faloutsos & Pavlo      CMU SCS 15-415/615      57

---

---

---

---

---

---

---

---

CMU SCS

### Guidelines for Query Tuning (Contd.)

- Avoid using intermediate relations:

vs.

```
SELECT E.dno, AVG(E.sal)
FROM Emp E, Dept D
WHERE E.dno=D.dno
AND D.mgrname='Joe'
GROUP BY E.dno
```

```
SELECT * INTO Temp
FROM Emp E, Dept D
WHERE E.dno=D.dno
AND D.mgrname='Joe'
```

*and*

```
SELECT T.dno, AVG(T.sal)
FROM Temp T
GROUP BY T.dno
```

---

---

---

---

---

---

---

---

CMU SCS

### Guidelines for Query Tuning (Contd.)

- Avoid using intermediate relations:

vs.

```
SELECT E.dno, AVG(E.sal)
FROM Emp E, Dept D
WHERE E.dno=D.dno
AND D.mgrname='Joe'
GROUP BY E.dno
```

```
SELECT * INTO Temp
FROM Emp E, Dept D
WHERE E.dno=D.dno
AND D.mgrname='Joe'
```

*and*

```
SELECT T.dno, AVG(T.sal)
FROM Temp T
GROUP BY T.dno
```

- Does not materialize the intermediate reln Temp.
- If there is a dense B+ tree index on  $\langle dno, sal \rangle$ , an index-only plan can be used to avoid retrieving Emp tuples in the second query!

Faloutsos & Pavlo CMU SCS 15-415/615 59

CMU SCS

## Concurrency

- Reduce lock durations
  - make transactions faster
  - break long transactions in shorter ones (but...)
  - build a data warehouse
  - consider lower isolation level

Faloutsos & Pavlo CMU SCS 15-415/615 63

---

---

---

---

---

---

---

---

CMU SCS

## Concurrency

- Reduce hot spots
  - delay operations on hot spots
  - optimize access patterns
  - partition (batch) operations on hot spots
  - choice of index (root of B-tree -> hot spot)

## Summary

- Database design consists of several tasks: *requirements analysis, conceptual design, schema refinement, physical design and tuning.*
  - In general, have to go back and forth between these tasks to refine a database design, and decisions in one task can influence the choices in another task.

Also see the paper by Roussopoulos + Yeh  
(on the course web site)

## Summary (cont'd)

- *workload* is vital:
  - What are the important queries and updates? What attributes/relations are involved?
- then:
  - refine conceptual schema and views
  - tune queries (indices, clustering, re-writing)

Know the **workload**  
 Know the **Q-opt internals**

## Summary - schema refinement

- May choose 3NF or lower normal form over BCNF.
- May *denormalize*, or undo some decompositions.
- May decompose a BCNF relation further!
- May choose a *horizontal decomposition* of a relation.
- Importance of dependency-preservation based upon the dependency to be preserved, and the cost of the IC check (see text)

## Tuning Queries and Views

- Sometimes, the DBMS may not be executing the plan you had in mind. Common areas of weakness:
  - Selections involving **null values**.      > 3\* salary
  - Selections involving **arithmetic or string expressions**.
  - Selections involving **OR conditions**.      like "%main%"
  - **Lack of evaluation features** like index-only strategies or certain join methods or poor size estimation.

CMU SCS **3 of 3**

### Summary - Tuning

So, may have to rewrite the query/view: Avoid

- nested queries,
- temporary relations,
- complex conditions, and
- operations like DISTINCT and GROUP BY.
