---

## Outline

- **Goals and structure of the course**
- **Administrative stuff**
- **Internet basics**
- **Course content**
- **Why an entire course on wireless?**
- **A bit of history of wireless (context)**
  
- **Please ask questions!**

Peter A. Steenkiste, CMU

**2**

2

## Goals of the Course

- **Learn about the unique challenges in wireless networking**
  - » Starting point is “regular” wired networks
  - » But the physical layer is very different!
- **Gain an understanding of wireless technologies at the physical and datalink layers**
  - » Physical layer: the focus is on concept + difference from wired
  - » Datalink protocols: focus on features specific to wireless
- **Impact of wireless on the rest of the protocol stack**
- **Get some hands-on experience in working with wireless networks and devices**
  - » Measurements of a wireless network
  - » Implementing wireless protocols, algorithms

Peter A. Steenkiste, CMU

3

3

## Lectures

- **Introduction**
  - » What is the course about?
  - » A very quick overview of networking
- **Physical layer concepts (~5)**
  - » Conceptual – this is not a wireless communications course!
- **LANs and WiFi (~6)**
- **Cellular networks (~4)**
- **Other technologies; PAN, RFID, NFC, .... (~5)**
- **GPS, localization, sensing (~3)**
- **Deployments: sensor networks, ad hoc, ...**

Peter A. Steenkiste, CMU

4

4

# Projects

## Two hands on projects

- 1. Measurement project to improve your understanding of wireless link properties**
  - » Measure signal strength and other signal properties
  - » How do they relate to the physical context?
  - » Individual project this semester
- 2. Design, implement and evaluate some wireless protocol, algorithm or system**
  - » Deal with the unpredictable nature of wireless links, mobility
  - » Multi-phase projects: start small and work your way up to larger networks or systems
  - » Define your own project
  - » Teams of 2 students

Peter A. Steenkiste, CMU

5

5

# Survey Presentations

- **Present a survey of a particular wireless topic to the class**
  - » Basically a short lecture
  - » Done in teams of 2 students
- **Survey content is based on research papers**
  - » Pick from a list of topics or define your own topic
  - » Initial set of papers provided for the topics on the list
- **Goals are:**
  - » Learn about a specific topic in depth
  - » Develop critical thinking skills
  - » Improve your presentation skills

Peter A. Steenkiste, CMU

6

6

## Graduate versus Undergraduate Course Numbers

The course content is the same, but they are separate courses:

- Some questions on the tests are different
- Different levels of expectation for projects and surveys, e.g., more aggressive, evaluation
- Final grades are curved separately
- The expectation is that students sign up for the course number that matches their status
  - » Let the instructor know if you are an UG signing up for the grad sections, e.g., as an ECE IMB student
- 18-452 is a Software Systems area course
- 18-750 is part of Wireless Systems concentration

Peter A. Steenkiste, CMU

7

7

## Prerequisites

- The course assumes you have taken an “Introduction to Computer Systems” course
  - » For example, based on the O’Hallaron and Bryant book
- We will also build on basic networking and signals concepts but the course includes introductory material on these topics
- Programming experience needed for project
  - » Often: C/C++ or other language, depending on project
- Course should be accessible to students with a broad range of backgrounds, but ...
- I don’t know you, so please ask questions when something is not clear!

Peter A. Steenkiste, CMU

8

8

## More Specifically ...

- **For undergraduates – 18-452**
  - » 18-213 or 15-213: Introduction to Computer Systems
- **For graduates – 18-750**
  - » 15-513/18-613 or ...
  - » Equivalent: a basic understanding of how computer systems work both inside the box (CMU, memory, IO, ..) and across boxes (familiarity with networking)
  - » If you have a degree in computer science or computer engineering, you should generally be ok
  - » Please talk to me if you have concerns

Peter A. Steenkiste, CMU

9

9

## Grading

### Grade distribution:

- **Homeworks: 10%**
- **Project 1: 5%**
- **Project 2: 25%**
- **Survey: 10%**
- **Midterm: 20%**
- **Final: 30%**

Peter A. Steenkiste, CMU

10

10

## Where to Look for Things

- **The course web page is your primary source for information**
  - » Lecture schedule and slides
  - » Office hours, contact information, ...
  - » Deadlines for homeworks, surveys, and projects
  - » Handouts
- **Piazza: questions on homeworks, Project 1**
- **Gradescope: used for some assignments**
- **Canvas: solutions assignments and grades**
  - » Also provides info on how to access Gradescope and Piazza
- **Midterm and final: in person and in class**

Peter A. Steenkiste, CMU

11

11

## Lecture Format

- **The recitation slots will be used for lectures early in the semester**
  - » The number of lectures will remain the same
- **Moving lectures earlier in the semester has several advantages:**
  - » Reduced class schedule in the second half of the semester when your workload is often higher, e.g., course projects
  - » It may help in picking survey and project topics
  - » A tentative lecture schedule is on the web page
- **The lecture slot duration is 1hr 50 min**
  - » Usual lecture duration for a 12 unit course is 80 min
  - » The plan is to stick close to that

Peter A. Steenkiste, CMU

12

12

## More Administrative Stuff

- **Lectures are Mo/Wed 2:00pm – 3:50pm EST**
  - » But lectures will typically be ~80 minutes, which is the typical lecture duration for a 12 unit course
- **Recitations are Fr 12:30pm -1:50pm EST**
  - » Only 80 minutes
- **Course admin: Michele Passerello – HH 1112**
  - » Appointments: Tracy Farbacher (CSD)
- **Teaching assistant: Sofia Martins**
- **Syllabus has more details on course policies**

Peter A. Steenkiste, CMU

13

13

## Textbook and Readings

- **“Introduction to Wireless Networking and Its Impact on Applications”**
  - » <https://link.springer.com/book/10.1007/978-3-031-27466-4>
  - » Free to CMU people – must be authenticated (Andrew)
  - » Based on the course but does not include all the material – lectures have more depth and cover more topics
- **Optional: “Wireless Communication Networks and Systems”, Corry Beard and William Stallings, Pearson, 2015**
- **Optional: “Wireless Communication”, Andreas Mulisch, Wiley, 2023**
  - » Both books provide more depth on the course material

Peter A. Steenkiste, CMU

14

14

## Collaboration

- **Traditional rules of collaboration apply**
  - » <https://www.cmu.edu/policies/student-and-student-life/academic-integrity.html>
- **You must complete individual assignments and tests by yourself**
  - » The use of AI tools such as ChatGPT constitutes unauthorized assistance
- **You are expected to collaborate with your partner in the team-based projects**
- **It is acceptable and encouraged to help fellow students with generic problems**
  - » E.g. where to find documentation, use of tools, ..
  - » You must give proper credit when reusing material

Peter A. Steenkiste, CMU

15

15

## CMU's Disability Services Office and CAPS are Great

- **I follow do what the Disability Services office decides, no questions asked**
  - » I don't need to know why you need accommodations
- **Please email me a copy of the accommodations sheet for us**
  - » I am also notified directly by their office
- **CAPS - Counseling and Psychologic Services**
  - » They are not just for people with severe mental health troubles
  - » They are a useful resource for anybody who is stressed or needs to talk to someone

Peter A. Steenkiste, CMU

16

16

# Outline

- Goals and structure of the course
- Administrative stuff
- Internet basics
- Course content
- Why an entire course on wireless?
- A bit of history of wireless

Peter A. Steenkiste, CMU

17

17

# The Internet is Big and Has Many, Many Pieces

**How do you design something this complex?**

Peter A. Steenkiste, CMU

18

18

## What Pieces Do We Need?

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>• <b>We need to be able to send bits</b> <ul style="list-style-type: none"> <li>» Over wired and wireless links</li> <li>» Based on analog signals</li> </ul> </li> <li>• <b>We really want to send packets</b> <ul style="list-style-type: none"> <li>» Statistical multiplexing: users can share link</li> <li>» Need addresses to deliver packets correctly</li> </ul> </li> <li>• <b>Communication must be reliable</b> <ul style="list-style-type: none"> <li>» But the network will lose or corrupt packets</li> <li>» Must recover from these errors</li> </ul> </li> <li>• <b>You need applications and services</b> <ul style="list-style-type: none"> <li>» Otherwise: who cares?</li> </ul> </li> </ul> | <p><b>Module:</b></p> <p><b>Physical</b></p> <p><b>Datalink<br/>Network</b></p> <p><b>Transport</b></p> <p><b>Application</b></p> |
|---|---|

Peter A. Steenkiste, CMU

19

19

## Two Hosts Exchanging Packets can be Easy or Hard

- |  |  |  |
|--|--|--|
| <p style="writing-mode: vertical-rl; transform: rotate(180deg);">Scaling up</p> <p style="font-size: 2em;">↓</p> | <ul style="list-style-type: none"> <li>• <b>Two or more hosts talk over a wire (bits)</b></li> <li>• <b>Groups of hosts can talk at two levels</b> <ul style="list-style-type: none"> <li>» Hosts talk in a network is homogeneous in terms of administration and technology</li> <li>» Hosts talk across networks that have different administrators and technologies</li> </ul> </li> <li>• <b>Differ in physical and admin properties, scale</b></li> </ul> | <p><b>Physical</b></p> <p><b>Datalink</b></p> <p><b>Internet</b></p> |
|--|--|--|

Peter A. Steenkiste, CMU

20

20

## A Bit More Detail

- **Physical layer delivers bits between the two endpoints of a “link”**
  - » Copper, fiber, wireless, visible light, ...
- **Datalink layer delivers packets between two or more hosts in a local area network**
  - » Ethernet, WiFi, cellular, ...
  - » **Best effort service:** should expect a modest loss rate
  - » “Boxes” that connect links are called bridges or switches
- **Network layer connects multiple networks**
  - » The Inter-net protocol (IP)
  - » **Also offers best effort service**
  - » Boxes that forward packets are called routers

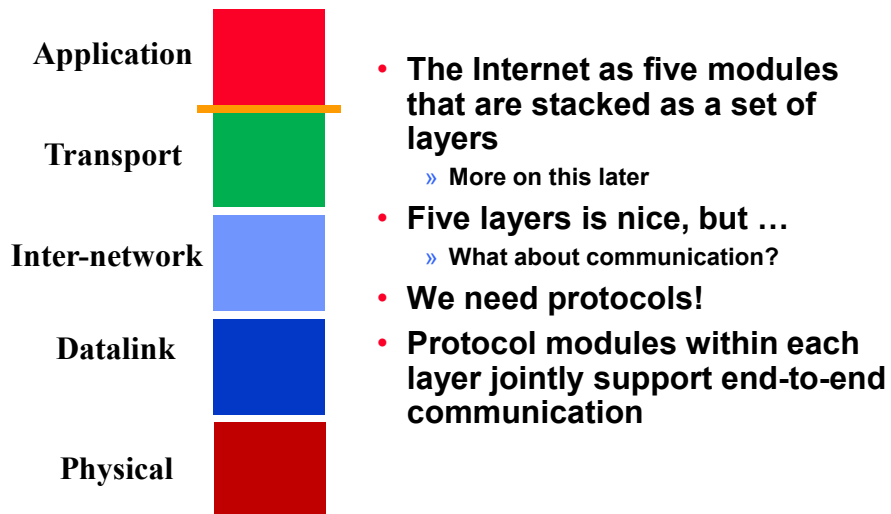

Scaling up the network

Peter A. Steenkiste, CMU

21

21

## Our Internet So Far

Peter A. Steenkiste, CMU

22

22

## Protocol Enable Communication

- An agreement between parties on how communication should take place.
- Protocols must define many aspects of the communication.
- **Syntax:**
  - » Data encoding, language, etc.
- **Semantics:**
  - » Error handling, termination, ordering of requests, etc.
- Protocols at hardware, software, *all* levels!
- Example: Buying airline ticket by typing.
- **Syntax:** English, ascii, lines delimited by “\n”

Peter A. Steenkiste, CMU

23

23

## Protocol and Service Levels

Peter A. Steenkiste, CMU

24

24

# The ISO Layered Network Model

## The Open Systems Interconnection (OSI) Model.

Peter A. Steenkiste, CMU

25

25

## OSI Functions

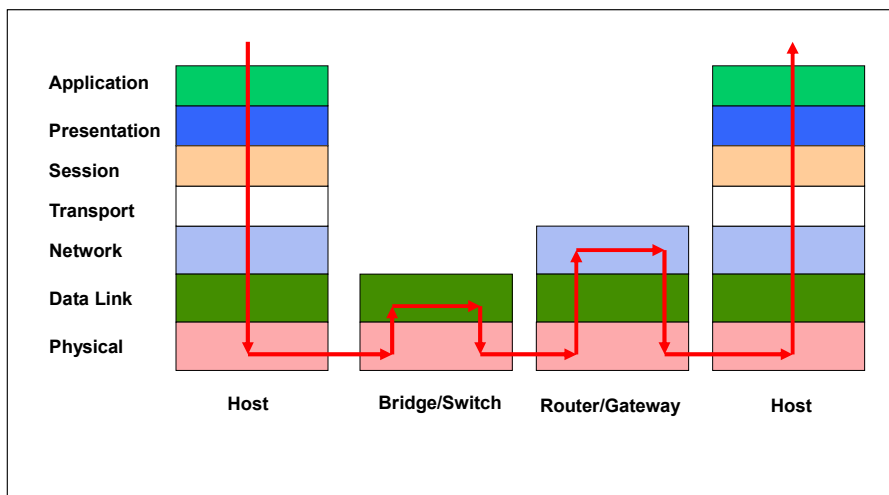

- (1) Physical: transmission of a bit stream.
- (2) Data link: flow control, framing, error detection.
- (3) Network: switching and routing.
- (4) Transport: reliable end to end delivery.
- (5) Session: managing logical connections.
- (6) Presentation: data transformations.
- (7) Application: specific uses, e.g. mail, file transfer, telnet, network management.

Peter A. Steenkiste, CMU

26

26

## Life of Packet

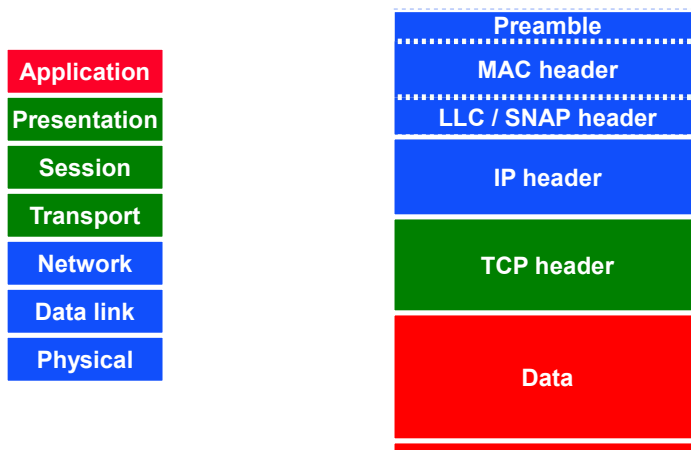

Peter A. Steenkiste, CMU

27

27

27

## A TCP / IP / 802.11 Packet

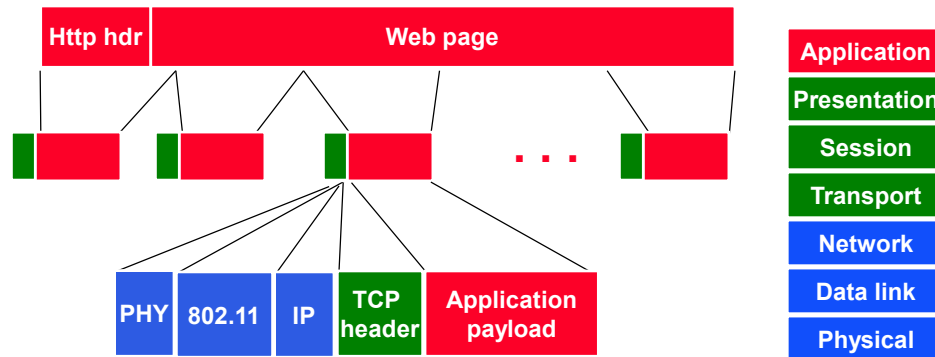

Peter A. Steenkiste, CMU

28

28

## Example: Sending a Web Page

Peter A. Steenkiste, CMU

29

29

## OSI Motivation

- **Standard approach of breaking up a system in a set of components with well defined interfaces, but components are organized as a set of layers.**
  - » Only horizontal and vertical communication
  - » Components/layers can be implemented and modified in isolation without affecting the other components
- **Each layer offers a service to the higher layer, using the services of the lower layer.**
- **“Peer” layers on different systems communicate via a protocol.**
  - » higher level protocols (e.g. TCP/IP, Appletalk) can run on multiple lower layers
  - » multiple higher level protocols can share a single physical network

Peter A. Steenkiste, CMU

30

30

## Benefits of Layered Architecture

- Significantly reduces the complexity of building and maintaining the system.
  - » Effort is  $7 \times N$  instead of  $N^7$  for  $N$  versions per layer
- The implementation of a layer can be replaced easily as long as its interfaces are respected
  - » Does not impact the other components in the system
  - » Different implementation versus different protocols
- In practice: most significant evolution and diversity at the top and bottom:
  - » Applications: web, peer-to-peer, video streaming, games, ..
  - » Physical layers: new types of copper, optical, wireless,
  - » The Internet Protocol in the “middle” is hard to change!

**True  
For  
Wireless?**

Peter A. Steenkiste, CMU

31

31

## Impact of the Physical Layer

**Wires:**  
reliable and predictable

**Wireless:**  
error prone and variable

- Packet losses and variable delay and bandwidth
- Disconnections
- Mobility: IP addresses change
- Must manage complex PHY to perform error control
- Sophisticated modulation & coding, bit rate adaptation

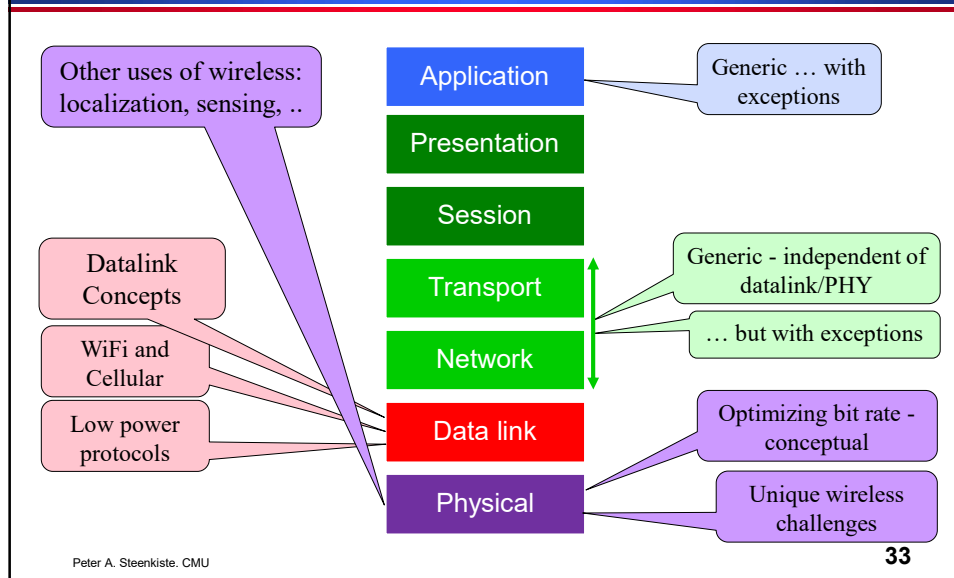

Peter A. Steenkiste, CMU

32

32

## What is Covered?

33

## Scope of Wireless Covered in the Course

- **Significant depth on two technologies**
  - » WiFi (unlicensed spectrum) and cellular (licensed spectrum)
  - » Optimize performance with high spectrum efficiency
  - » Sophisticated protocols to fight physical layer challenges
- **Other wireless communication technologies**
  - » RFID/NFC, low-power, sensor networks, ...
- **Wireless deployments**
  - » Infrastructure WiFi, ad hoc, sensor networks, vehicular, ..
- **Other applications of wireless**
  - » GPS, Wifi for localization, dynamic spectrum access, ...
  - » Diverse set of topics covered in the surveys

Peter A. Steenkiste, CMU

34

34

## Course Material

- **Most slides were prepared by the course instructor**
- **Some slides contain material from other sources**
  - » Previous co-instructors have contributed slides
  - » Some figures are taken from the textbook
  - » Some lectures contain material from other sources

35

## Outline

- **Goals and structure of the course**
- **Administrative stuff**
- **Internet basics**
- **Course content**
- **A bit of background on wireless**

36

37

## Spectrum Shared by Many Users

- Spectrum allocated by FCC and NTIA
- Two types of spectrum bands:
  1. Licensed spectrum: exclusive access to an organization
    - Federal agencies, broadcast TV, first responders, ...
    - Commercial, e.g., cellular operators
  2. Unlicensed spectrum: everyone can use it with appropriate equipment, e.g., WiFi, zigbee, ...
- Other trends:
  - » Technology improvements have allowed us to use higher frequency bands over time
  - » Many bands have low utilization
  - » Older bands often use very inefficient technologies

38

# Wireless Technologies

Peter A. Steenkiste, CMU

39

39

# Why so many Technologies?

- **Diverse application requirements**
  - » Energy consumption
  - » Range
  - » Bandwidth
  - » Mobility
  - » Cost
- **Diverse deployments**
  - » Licensed versus unlicensed
  - » Provisioned or not
- **Technologies have different**
  - » Signal penetration
  - » Frequency use
  - » Cost
  - » Market size
  - » Age, integration

Peter A. Steenkiste, CMU

40

40

## Application Trends in Wireless

- **Early days: specialized wireless networks**
  - » Broadcast TV and radio, voice calls, data, ..
  - » The same was true for wired networks
- **Today: single network for diverse apps**
  - » Phones, tables, and laptops all run similar applications
  - » Everything runs over the Internet (= data)
  - » The edge of the Internet is increasingly wireless
- **Wireless is expanding in new domains**
  - » Originally: support nomadic and mobile users
  - » Sensor networks, body area networks, RFID, ...
  - » Emerging: sensing, backscatter, energy harvesting, ...
- **Future?**

Peter A. Steenkiste, CMU

41

41

## Outline

- **Goals and structure of the course**
- **Administrative stuff**
- **Internet basics**
- **Course content**
- **Why an entire course on wireless?**
- **A bit of history of wireless**

Peter A. Steenkiste, CMU

42

42

## Some History...

- **Tesla credited with first radio communication in 1893**
- **Wireless telegraph invented by Marconi in 1896**
- **First telegraphic signal traveled across the Atlantic ocean in 1901**
- **First “cell phone” concept developed in 1946**
  - » FCC allocated spectrum in the 70s
  - » 1G commercial service in the early 80s (analog)
  - » New generation every 10 years
- **GPS project started in 1973, complete in 1995**
- **WiFi technology developed in the 1990s**
  - » After FCC opened up 900MHz, 2.4 and 5.8GHz bands in 1985
