

DESIGNING THE MOBILE EXPERIENCE

Mobile experiences need to be developed and designed for information access on-the-go, which requires mobile-specific design and content principles:

Mobile-relevant design:

- content managed for quick and easy reference
- limited imagery for faster loading speeds
- mobile platform agnostic design
- surface most critical user tasks

Content format:

- abridged product and prescription information
- quick links to navigation
- mobile contact information

Context-relevant functionality:

- click-to-call (e.g. pharma rep, customer service)
- send to email for longer form content
- GPS pharmacy locator
