

Materials for Laminated Object Manufacturing (LOM)

Typical material for manufacturing with LOM ([TWI-Global](#))

- Paper (most common)
- Plastic (more complex to cut)
- Metal (more complex to cut)

These enable LOM to be relatively low cost due to readily available material.

New Materials for printing:

- Ceramic ([Dermeik & Travitzky](#))
 - Light weight, high temperature resistance, mechanical strength
 - Requires post processing
- Polymer
 - Not a lot of study
 - Requires post processing
