Machine Learning Department School of Computer Science Carnegie Mellon University

# Instruction Fine-tuning + Reinforcement Learning with Human Feedback (RLHF)

Matt Gormley Lecture 12 Feb. 26, 2024

## Reminders

- Homework 3: Applying and Adapting LLMs
  - Out: Wed, Feb 21
  - Due: Thu, Feb 29 at 11:59pm

#### **INSTRUCTION FINE-TUNING**

# Prompting for Instruction Fine-tuned Models

- Models like ChatGPT, Llama-2 Chat, etc. have been fine-tuned as chat assistants
- These (often) were trained with specific prompt templates that segment the prompt into different parts: (1) system (2) assistant (3) user

lat	sys:	[INST] < <sys>&gt; You are a helpful AI assistant &lt;</sys> > [/INST]
ama-2 Ch	asst:	[INST] Organisms require energy in order to do what? [/INST]
	user:	mature and develop
ס	sys:	### Instruction:
Alpaci	asst:	### Instruction: Organisms require energy in order to do what?
	user:	### Response: mature and develop

### Prompting for Instruction Fine-tuned Models

#### Llama-2-70B

Story: Jason listened to the weather and heard it was goingto be sunny. He thought the kids might like to goswimming. He gathered up the swimsuits, towelsand sunscreen. Jason and the kids got into the truckand drove to the beach. They spent the next 2 hoursplaying and splashing in the surf.

**One-sentence Summary:** 

Model Output

Prompt

Jason took the kids swimming at the beach after hearing the weather forecast, gathering necessary items and driving there.

### weather Story: Jason listened to the weather sunny. He and heard it was goingto be sunny. H

and heard it was goingto be sunny. He thought the kids might like to goswimming. He gathered up the swimsuits, towelsand sunscreen. Jason and the kids got into the truckand drove to the beach. They spent the next 2 hoursplaying and splashing in the surf.

#### One-sentence Summary:

Llama-2-7B Chat

Sure! Here is a one-sentence summary of the story: Jason and the kids went on a funfilled day at the beach, playing and splashing in the surf after gathering all the necessary items, including swimsuits, towels, and sunscreen.

# Prompting for Instruction Fine-tuned Models

#### Llama-2-70B

Llama-2-7B Chat

Story: Jason listened to the weather Story: Jason listened to the weather and heard it was goingto be was goingto be sunny. He Lllama-2-7B Chat was thought the kids might like kids might like to instruction fine-tuned goswimming. He gathered u g. He gathered up the (more on this later) swimsuits, towelsand sunsc owelsand sunscreen. and so its responses Jason and the kids got into he kids got into the look quite different truckand drove to the beac ove to the beach. They from the Llama-2 ext 2 hoursplaying and spent the next 2 hoursplayi models that were not splashing in the surf. the surf. **One-sentence Summary: One-sentence Summary:** 

Model Output Jason took the kids swimming at the beach after hearing the weather forecast, gathering necessary items and driving there.

Story text from https://arxiv.org/pdf/1910.00998.pdf

Sure! Here is a one-sentence summary of the story: Jason and the kids went on a funfilled day at the beach, playing and splashing in the surf after gathering all the necessary items, including swimsuits, towels, and sunscreen.

#### Prompt

## Instruction Fine-Tuning

- Motivation:
  - Suppose you want to build a chat agent
  - LLMs are trained to reduce the perplexity of a large training corpus containing web text, articles, code, etc. (i.e. it's good at completing your
  - But a chat agent should not merely predict what comes next, it should behave conversationally and know when to stop
  - We want to align the LLM with the expectations of a human user for a given task in some instruction

- Key idea:
  - Build a "chat agent" training dataset
  - Fine-tune the LLM on this data
- This technique goes by many names...
  - instruction fine-tuning
  - chat fine-tuning
  - alignment
  - behavioral fine-tuning

# Instruction Fine-Tuning

#### **Question:**

How can we build a "chat agent" training dataset?

#### **Answer:**

 $\succ$  Sources of prompts: -human labeler -scrape the web for conversational data is - use people's search queries (adapted to real sentences) - model could paraphrase existing prompt Sources of responses: - (possibly differt) human labeler - model can generate the response Lybut w/the help of in-context

- Key idea:
  - Build a "chat agent" training dataset
  - Fine-tune the LLM on this data
- This technique goes by many names...
  - instruction fine-tuning
  - chat fine-tuning
  - alignment
  - behavioral fine-tuning

Figure 2: A **Timeline of Public Instruction Tuning Collections** specifies the collection release date, detailed information on the finetuned models (the base model, their size, and whether the model itself is Public (P) or Not Public (NP)), what prompt specification they were trained for (zero-shot, few-shot, or Chain-of-Thought), the number of tasks contained in the Flan 2022 Collection (released with this work), and core methodological contributions in each work. Note that the number of tasks and of examples vary under different assumptions and so are estimates. For instance, the definition of "task" and "task category" vary by work, and are not easily simplified to one ontology. The reported counts for the number of tasks are reported using task definitions from the respective works.

Figure from http://arxiv.org/abs/2301.13688

<sup>†</sup> indicates concurrent work.

#### Dataset: InstructGPT

- InstructGPT consisted of 13k prompt/response pairs
- Labelers were tasked with writing an instruction prompt and a demonstration response of how a chat agent should reply
- Some prompts were taken from early users of the OpenAI API, and labelers wrote the demo response
- All data is closed source

Table 1: Distribution of use case categories from our API prompt dataset.

Use-case	(%)
Generation	45.6%
Open QA	12.4%
Brainstorming	11.2%
Chat	8.4%
Rewrite	6.6%
Summarization	4.2%
Classification	3.5%
Other	3.5%
Closed QA	2.6%
Extract	1.9%

- Dolly is an open source follow-up to InstructGPT of 15k instruction fine-tuning examples
- Employees of DataBricks wrote all the prompt / response pairs

We set up a contest, where the top 20 labelers would get a big award. We also outlined 7 very specific tasks:

- Open Q&A: For instance, "Why do people like comedy movies?" or "What is the capital of France?" In some cases, there's not a correct answer, and in others, it requires drawing on knowledge of the world at large.
- Closed Q&A: These are questions that can be answered using only the information contained in a passage of reference text. For instance, given a paragraph from Wikipedia on the atom, one might ask, "What is the ratio between protons and neutrons in the nucleus?"
- Extract information from Wikipedia: Here an annotator would copy a paragraph from Wikipedia and extract entities or other factual information such as weights or measurements from the passage.
- Summarize information from Wikipedia: For this, annotators provided a passage from Wikipedia and were asked to distill it to a short summary.
- Brainstorming: This task asked for open-ended ideation and an associated list of possible options. For instance, "What are some fun activities I can do with my friends this weekend?".
- Classification: For this task, annotators were asked to make judgments about class membership (e.g. are the items in a list animals, minerals or vegetables) or to judge the properties of a short passage of text, such as the sentiment of a movie review.
- Creative writing: This task would include things like writing a poem or a love letter.

Category	Instruction	Context	Response
Open Q&A	What individual has won the most Olympic gold medals in the history of the games?		Michael Phelps has won the most gold medals of all time with 23 golds.

Category	Instruction	Context	Response
General Q&A	What is best Playstation or Xbox		Playstation and Xbox are two competing game consoles, where which is "best" will depend on the preferences of the gamer. From a graphics and performance perspective they are comparable, with Sony's Playstation technically leading, though most gamers would be unlikely to notice a significant difference. From a game library perspective, both consoles have their respective first-party titles that appeal to different demographics. For example, Microsoft has seen great popularity due to popular title Halo being exclusively available on the console. On the other hand, Playstation has popular exclusive titles such as God of War and Gran Turismo. Ultimately the decision of which console is best will likely come down to which games titles the purchaser prefers.

Category	Instruction	Context	Response
Closed Q&A	When was the first Reading railway station opened?	Reading railway station is a major transport hub in Reading, Berkshire, England. It is on the northern edge of the town centre, near the main retail and commercial areas and the River Thames, 36 miles (58 km) from London Paddington. The first Reading station was opened on 30 March 1840 as the temporary western terminus of the original line of the Great Western Railway (GWR). Reading is the ninth-busiest station in the UK outside London and the second busiest interchange station outside London with over 3.8 million passengers changing trains at the station annually.	The first Reading railway station was opened on the 30th of March, 1840.

Category	Instruction	Context	Response
Information Extraction	Extract all of the dates mentioned in this paragraph and list them using bullets in the format {Date} - {Description}	Daniel Leavitt was born November 16, 1813, at Rye, New Hampshire, the son of Benning Leavitt, influential businessman, state senator, county commissioner and later Chicopee Selectman, and his wife Olive (Jenness) Leavitt. Daniel Leavitt married in 1838 at West Springfield, Massachusetts, Ruth Jeannette Ball. They had three children.	<ul> <li>November 16, 1813 - This is when Daniel Leavitt was born</li> <li>1838 - This is when Daniel Leavitt married his wife Ruth Jeannette Ball.</li> </ul>

Category	Instruction	Context	Response
Brainstorming	What are some unique curtain tie backs that you can make yourself?		There are many items you can use to make a curtain tie back. Some ideas for this include a chain, a circle and pin, jute rope, wooden beaded rope, a necklack or bracelet, a door knob, a length of a leather belt, macrame rope, or a string of artificial flowers.

Category	Instruction	Context	Response
Summarization	What is a dispersive prism?	In optics, a dispersive prism is an optical prism that is used to disperse light, that is, to separate light into its spectral components (the colors of the rainbow). Different wavelengths (colors) of light will be deflected by the prism at different angles. This is a result of the prism material's index of refraction varying with wavelength	A dispersive prism is an optical prism that disperses the light's different wavelengths at different angles. When white light is shined through a dispersive prism it will separate into the different colors of the rainbow.

Category	Instruction	Context	Response
Classification	Identify which instrument is string or percussion: Cantaro, Gudok		Gudok is string, Cantaro is percussion.

Category	Instruction	Context	Response
Creative Writing	Write a haiku about how much I love pickles.		Caressed by sweet brine, you are crispy and crunchy. Oh, won't you be mine?

Category	Instruction	Context	Response
Creative Writing	What should I do on a free afternoon in San Francisco?		You can visit and take photos at San Francisco's landmarks such as Pier 39 or Golden Gate Bridge. If you enjoy walking outdoors, there are several large parks in the city. You can visit Golden Gate Park and the various attractions and museums located in the park. The Presidio is also a popular park where you can get some of the best views of Golden Gate Bridge.

Figure from http://arxiv.org/abs/2109.01652

- Flan (Wei et al., 2021) was one of the first instruction fine-tuning datasets
- Recent versions of the dataset contain ~3.5 million examples
- Key idea: build instruction finetuning examples from existing NLP tasks/datasets (12 tasks, 62 datasets)
- For each NLP task/dataset, Flan ۲ created 10 different templates

Premise	Template 1	<u>Template 3</u>
Russian cosmonaut Valery Polyakov set the record for the longest continuous amount of time spent in space, a staggering 438 days, between 1994 and 1995. Hypothesis Russians hold the record for the longest stay in space. Target Entailment Not entailment	<pre><pre><pre><pre><pre><pre>Sased on the paragraph above, can we conclude that <hypothesis>? <options></options></hypothesis></pre> <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre>	Read the following and determine if the hypothesis can be inferred from the premise: Premise: <premise> Hypothesis: <hypothesis> <options> Template 4,</options></hypothesis></premise>

#### Instruction Fine-Tuned Models

- These models begin with a pretrained Base Model
- They are then finetuned on some instruction following dataset
- The resulting model is often very effective even at a smaller scale than the largest LLMs available (e.g. 7B – 13B parameters is typical)

Instruction fine-tuned LIMs	# Parame	Base Model	Fine-tuning Trainset

# REINFORCEMENT LEARNING WITH HUMAN FEEDBACK (RLHF)

### RLHF

- InstructGPT uses Reinforcement Learning with Human Feedback (RLHF) to fine-tune a pretrained GPT model
- From the paper: "In human evaluations on our prompt distribution, outputs from the 1.3B parameter InstructGPT model are preferred to outputs from the 175B GPT-3, despite having 100x fewer parameters."

Step 1 Collect demonstration data,

and train a supervised policy.

A prompt is sampled from our prompt dataset.

A labeler demonstrates the desired output behavior.

This data is used to fine-tune GPT-3 with supervised learning.

 $\odot$ 

Explain the moon

Step 2

Collect comparison data, and train a reward model.

This data is used to train our reward model.

 $\odot$ Explain the moon landing to a 6 year old

A B Explain gravity Explain war. C D Moon is natural People went to satellite of. the moon.

D > C > A = B

The reward is used to update the policy using PPO.

#### Step 3

A new prompt

Optimize a policy against the reward model using reinforcement learning.

Step 1

#### Collect demonstration data, and train a supervised policy.

A prompt is sampled from our prompt dataset.

A labeler demonstrates the desired output behavior.

This data is used to fine-tune GPT-3 with supervised learning.

٢

Explain the moon

Collect comparison data, and train a reward model.

Step 2

Moon is natural satellite of ... the moon.

A labeler ranks the outputs from best to worst.

This data is used to train our reward model.

#### $\odot$ Explain the moon landing to a 6 year old

D>C>A=B

D > C > A = B

#### A new prompt is sampled from the dataset.

Step 3

Optimize a policy against

the reward model using reinforcement learning.

The policy generates an output.

> The reward model calculates a reward for the output.

The reward is used to update the policy using PPO.

-Write a story about frogs Once upon a time...

 $r_k$ 

### RLHF

•

• Step 1 performs instruction fine-tuning on 13k training examples

- This aligns the model behavior with what we would expect of a chat agent
- But the diversity of the interactions might still be limited by the contents of the training data

using PPO.

### RLHF

Collect demonstration data, and train a supervised policy.

A prompt is sampled from our prompt dataset.

desired output behavior.

This data is used to fine-tune GPT-3 with supervised

Step 2

Collect comparison data, and train a reward model.

A prompt and several model outputs are sampled.

D>C>A=B

9

Explain the moon

A labeler ranks the outputs from best to worst.

This data is used to train our reward model.

In Step 2, takes 33k • prompts and samples a collection of responses from the instruction fine-tuned model for each one

The human labeler ranks the  $K \in \{4, \dots, 9\}$ responses

Figure from <a href="https://arxiv.org/pdf/2203.02155.pdf">https://arxiv.org/pdf/2203.02155.pdf</a>

#### Playground task **1** Talk to the assistant

#### Task 1 of 5

Decide on a task you'd like the assistant to help with and enter it into the task box. Interact with the AI assistant. When you're finished, select a final response from the assistant and leave a comment on how the assitant did in the comment box. Click to go to the next task.

Rating	though	t the assistant	was
	Rating		
	Bad		Good

Next Task

#### Human

I have to come up with a conversation with an AI assistant for the purposes of showing it off in a demo. What sorts of conversation topics would you recommend?

#### Assistant

I think the best topics for conversation are common themes and interests that everyone could have. Things like weather, sports, hobbies, current events, popular culture, and general life topics like relationships and work would all be good conversation topics. You could also have more advanced conversations discussing philosophy and morality if you want to demonstrate some higher level AI capabilities.

#### 📴 Human

I think I'm more interested in an advanced conversation. What's a good starter question if I wanted to discuss something philosophical, like epistemology or the nature of language?

#### 🎃 Assistant

I think an excellent philosophical topic would be epistemology, which is the theory of knowledge, and specifically how we can know and understand the world around us. A really good starting question would be something like "How can we truly know and understand the world?", or "What is the nature of knowledge?". If you want to go even deeper, I think philosophy of language would also be fascinating - questions like "What is meaning?", "How do language and thought relate?", and "How can language mislead and deceive?" would be great discussion topics.

#### Human

Α

В

How would you answer a question like: How do language and thought relate?

A is better

#### Choose the most helpful and honest response

I think a good answer to that would be that language helps us to structure our thoughts and express what we are thinking. Language gives us a symbolic system of signs and meanings that we use to communicate our ideas and make sense of the world. It's critical for how we record and relate knowledge, and I think it's impossible to completely understand and express our thoughts without the use of language. Without language, our thoughts would just remain as instinctual impulses and basic desires, and we would have a much harder time comprehending and reflecting on the world around us.

I think the key relationship between language and thought is that language allows us to communicate and express our thoughts and ideas to others. Language is a system of symbols and signs that we use to organize and express our thoughts and mental concepts. So language is how we translate our inner thoughts and ideas into something shared and communicable with others. Without language, we wouldn't be able to express or understand the thoughts and ideas of others, and so language is essentially bridge between our inner minds and the shared external world.

A A A <sup>A</sup> <sup>B</sup> <sup>B</sup> <sup>B</sup>

B is better

# Example Interface for Crowdworkers

#### Figure from http://arxiv.org/abs/2204.05862

- The reward model is a copy of the Step-1 LLM, but with the softmax over words replaced so that it outputs a single scalar value, i.e. the reward
- The model is trained so that rewords of the higher ranking (winning) responses are larger than those of the lower ranking (losing) responses

#### Step 2

Collect comparison data, and train a reward model.

A prompt and several model outputs are sampled.

B (A) Explain gravity Explain war. C D Moon is natural People went to

D>C>A=B

 $\odot$ 

Explain the moon

landing to a 6 year old

A labeler ranks the outputs from best to worst.

This data is used to train our reward model.  In Step 2, takes 33k prompts and samples a collection of responses from the instruction fine-tuned model for each one

 The human labeler ranks the K ∈ {4,...,9} responses

Figure from https://arxiv.org/pdf/2203.02155.pdf

fotal ex= N(K)

- The reward model is a copy of the Step-1 LLM, but with the softmax over words replaced so that it outputs a single scalar value, i.e. the reward
- This regression model is trained so that rewards of the higher ranking (winning) responses are larger than those of the lower ranking (losing) responses

- The objective function for the reward model:  $loss(\theta) = \frac{1}{\binom{K}{2}} \mathbb{E}_{(x,y_w,y_l)\sim D} \left[ log \left( \sigma \left( r_{\theta}(x,y_w) - r_{\theta}(x,y_l) \right) \right) \right]$ • where • where
  - x is the prompt
  - $y_w, y_l$  are the responses
  - w denotes the winner, l the loser
  - $r_{\theta}(x, y_l)$  is the output of the reward model
    - *D* is the dataset of human rankings
  - all the (K choose 2) rankings for each prompt are kept • together in a single batch for efficiency/stability

# RLHF

- Step 3 trains the model from Step 1 using reinforcement learning
- Instead of having a human or some expert model provide rewards, we take the reward model from Step 2 as "ground truth" for the rewards
- Reinforcement learning uses (state, action, reward) tuples as training data
  - state = prompt
  - action = response
  - reward = scalar from regression reward model
  - each episode lasts exactly one turn
- RL objective is combined with pre-training objective:

$$\begin{aligned} \mathsf{objective}(\phi) &= \mathbb{E}_{(x,y)\sim D_{\pi_{\phi}^{RL}}} \left[ r_{\theta}(x,y) - \beta \log \left( \frac{\pi_{\phi}^{RL}(y|x)}{\pi_{\phi}^{SFT}(y|x)} + \gamma \mathbb{E}_{x\sim D_{\mathsf{pretrain}}} \left[ \log \left( \pi_{\phi}^{RL}(x) \right) \right] \right] \end{aligned}$$

#### **RLHF** Results

- Does RLHF help?
- Yes, it increases helpfulness and harmlessness
- It does not hurt zero-shot or fewshot performance on most tasks

### **RLHF** Results

- Does RLHF help?
- Yes, it increases helpfulness and harmlessness
- It does not hurt zero-shot or fewshot performance on most tasks

# Less-is-More for Alignment (LIMA)

- The latest results from LIMA suggest that maybe we need relatively little instruction fine-tuning data and that RLHF might not be as critical as previously assumed
- LIMA only uses 1000 instruction fine-tuning examples and no RLHF

## Less-is-More for Alignment (LIMA)

- The latest results from LIMA suggest that maybe we need relatively little instruction fine-tuning data and that RLHF might not be as critical as previously assumed
- LIMA only uses 1000 instruction fine-tuning examples and no RLHF

Figure 1: Human preference evaluation, comparing LIMA to 5 different baselines across 300 test prompts.
